Final year project: University Web Portal
Developing a responsive and dynamic web portal for a university's associated people and departments. This project aimed to provide online content management facilities for faculty and administration meanwhile providing online social forum for the people in university.

Development of the web portal started with registration plat form where students and faculty member could get themselves registered. Students and faculty members were managed to have different rights regarding uploading, sharing, editing and downloading data. Registration platform contained the two major module depending on the different rights.

- Faculty Module

- Student Module

Blog of university web portal was developed using WordPress in different directory using WordPress.
Technologies Used:
PHP, MySQL, WordPress, HTML, CSS
